By using stories in Tableau, you can effectively communicate complex data in a way that is both interactive and engaging, making it easier for the audience to follow along and understand the insights. It's a tool for **data storytelling**, allowing you to present insights in a cohesive, engaging way that takes viewers through a logical progression of findings or analyses.

In Tableau, **Story** is a feature that allows you to create a sequence of dashboards, visualizations, and text to present data insights in a cohesive and narrative-driven way. It's like a slideshow within Tableau that guides the audience through a series of data points, helping them understand key insights, trends, or outcomes of your analysis.

Global AI Adoption in Education

This section provides an overall view of AI adoption in education, highlighting the key indicators and the current global adoption landscape.

This section shows how AI adoption in education has changed over time, highlighting the overall trend from 2015 to 2026.

This section compares AI adoption across countries, showing how adoption levels vary across different parts of the world.

This section compares AI adoption across regions, showing how adoption levels vary across different parts of the world.

Global AI in Education- Executive Overview

How widespread is AI adoption, and how has it changed globally?

KPI

Daily Ai Usage Min	Education Index	Internet Penetration	Schools Ai Adoption	Student Ai Usage	Teacher Ai Usage	Overall Ai Adoption
32.82	0.78	74.70	29.41	30.99	29.91	30.10

AI Adoption in Education: 2015-2026

AI adoption by Country
